**Wisconsin Water Alliance Statement on Evers Endorsement of Agency Recommendations**

[Madison, Wis.] – Dan Ellsworth, president of Wisconsin Water Alliance, released the statement below following Governor Tony Evers' endorsement today of water quality recommendations by the Departments of Natural Resources; Agriculture, Trade, and Consumer Protection; and Health Services:

"Clean drinking water and a healthy freshwater supply are critical to our state's well being, and we must ensure proper access for residents. Wisconsin Water Alliance will continue to advocate for reasonable policies that safeguard residents and protect the environment while ensuring the continued use of this vital resource as a driver of our state's economy. As part of this, additional regulations without proper investments in water quality are destructive when it comes to achieving cleaner water. We look forward to being part of the discussion on important water issues and to helping secure a bright future for water in Wisconsin."
